

Press release

Brussels, 20 June 2012 - PerVoice receives the META (Multilingual Europe Technology Alliance) Seal of Recognition by the META Technology Council

At the second edition of META Awards held in Brussels on June 20th, PerVoice was awarded the META Seal of Recognition for Audioma-Box. The META Seal of Recognition recognises excellence in software, products, and services which actively contribute to the European Multilingual Information Society. The META Technology Council, a panel of 30 experts drawn from the European Language Technology landscape, recognises the contribution Audioma-Box makes to the European Multilingual Information Society.

Audioma-Box is the Speech-To-Text basic product by PerVoice for processing audio files in batch mode. Thanks to eight languages available (growing to 12 in the near future), Audioma-Box is becoming a European success story in the field of Language Technologies, as it is able to enter and grow in the international market (for example <http://langtechnews.hivefire.com/articles/share/101526/>).

The META Seal of Recognition is awarded annually to selected products and services which actively contribute to the initiative's goals. This year is the second time the Seal of Recognition has been awarded at a special ceremony as part of META-FORUM 2012 held in Brussels, Belgium. Previous winners of this award include Google Translate, Loquendo, Lucy LT, VecSys, LinguaTec, Softissimo, SVOX, Systran and TAUS.

"After several years of development, in not favourable market conditions, we are finally starting to reap the first successes both in terms of awards and business" said Alessandro Tescari, CEO of PerVoice. "This major European prize, which last year was awarded, among others, to Google Translate, confirms that investments by PerVoice are going in the right direction and that our sales target is to be directed more towards the opportunities that come from international markets. "

PerVoice S.p.A., start-up of the "Fondazione Bruno Kessler" Research Labs and other local enterprises, is the first Italian company specialized in processing, analyzing and evaluating the spoken language. PerVoice vocal solutions cover a wide range of ASR applications for New Media, Telco & Utilities, Reporting and Dictation businesses.

PerVoice technologies can automatically create transcribed texts, synchronize spoken contents, extract information from TV, radio and web channels, analyze large volumes of telephone calls, and generate subtitles for broadcasting.

*META, the **Multilingual Europe Technology Alliance** brings together researchers, commercial technology providers, private and corporate language technology users, language professionals and other information society stakeholders. META is preparing the necessary ambitious joint effort towards furthering language technologies as a means towards realising the vision of a Europe united as one single digital market and information space.*
